Jade –

Good deal, the data has been uploaded, one file for each year, 2015-2024! I can get you prior years if needed, but figured 3 solid years of water use data before any of the rate shenanigans happened would be good to start with. I'll have 2025 completed by early Feb 2026.

I also uploaded your Billing Data sheet with most of the info you requested. I did not provide water use data in the format you wanted, but all of the info is there (plus more) in the individual year files. The Structure Type (StrType) and Unit Count (#Unit) fields will be important for you to pay attention to with our data.

Finally, I saw my rate sheet in there previously shared, and updated it with some context about how to cross-walk the account level data to the rate it'd be charged. Also added in the multi-family (MF) rates too; just a flat rate with little excitement. Not sure you're going to find much with MF customers and rates as that living cost gets bundled in with all the other "rent" costs, and most all MF residents are not individually metered for their use, so no price signal with consumption.

Drew

Hello Drew,

That's great to hear!

I have a Westminster OneDrive folder that I will give you edit access to so you can upload files directly to that. Here is the link as well, for your convenience: [Westminster - OneDrive](#). Please let me know if you have any issues uploading the files there, and I will look into another shared-folder solution.

Best,

Jade Foley-Pike (she/her)

Jade -

Good news on my side! Per our City Attorney's Office, we do not need an agreement/contract to share water use data, as long as it's totally anonymized w no PII. Your process does that so, we are good to go. However, each of my files is going to be 5MB, and for a decade or more, that'll obviously reach the limit on email, should I send them to you in a series of emails, or do you have a data sharing site I can upload to?

Hey Jade –

PFA 3 different data sharing contracts. Because there's no household identifier in your request (i.e., no PII), is it your opinion that no contract is required? I don't know if my city attorney's office would necessarily agree, but I'd think CU would have an opinion.

Good morning Drew!

It was also great to see you at WaterWise! Thank you for reaching out to collaborate on this and for sending over the water rate information. That is some very interesting information, especially with all of the changes that happened in 2022. I'm excited to dive into those changes and discover how the water use changed across households when those were implemented.

I have attached a project summary that outlines the goals and methods of this project, including how we would like to collaborate. You mentioned in your email the "zero-cost data sharing agreements" that CoW has done — can you let us know the next steps for an agreement to share household billing data?

Next steps include:

- *Collecting & sharing household water use data* — I have attached a spreadsheet template that you can enter this data into or use as a reference point for the types of data we are looking to collect. Based on the rate information you have shared, we would like this data to at least include 2018-2023 so we can analyze the usage changes around those rate changes.
- *Interviews & rate change conversation* — At the beginning of next year, we are going to start the interview portion of this project, which will include a conversation with you to discuss the implementation of these rate changes more in depth. We will reach out closer to that time to schedule that call.

Thank you again for this information and for reaching out! I am looking forward to working with you on this, and please let me know if you have any questions.

Jade –

Nice to see you at the CWW conference last week! Officially seeking collaboration on your water rates project. Attached are Westminster's water rates from 2010 to present for in-city, single-family residential customers (~30,000 accounts), and boy do we have some fun things in here that may prove very interesting from a research perspective. Highlights include:

- Long stability from 2010-2018, with moderate annual increases
- 2019: significant price increases in T2 and T3 based on recommendation of 2018 cost-of-service study and council adoption
- 2021: zero increase per COVID economic challenges (zero increase for 2022 as well)
- Mar-22: new council (following recall elections and water rates as primary political topic) seeks "rate relief" eliminating T3 price
- Jun-22: additional rate changes expand volume in tiers and reduce pricing further

- 2023-2025 stability at 'new' rate structure

CoW has executed many zero-cost data sharing agreements in the past, so keep me in the loop on next steps.
